

[ BYNATURE ]

## ABOUT US

ByNature is all about reconnecting people with nature. With a growing network of architects, designers, interior landscapers, retailers and more, ByNature strives to bring interiors to life and make people feel good. Aside from importing and distributing exclusive and innovative products across North America, ByNature also provides consultation and design services.

Understanding the increasing lack of nature in the urban landscape and the essential role that plants play in our lives, ByNature believes that any space can be transformed into a healthy living environment.

Enjoy. Breathe. Feel Good.

## PRESERVED

Our plants and moss are preserved in an innovative and eco-friendly way using 100% natural oils and food dye. This allows the plants to maintain their authenticity without the need for maintenance. From Mossart walls to Folia frames, ByNature prides itself in supplying a large range of preserved products to fulfill any creative endeavour.

# MOSSART

Our Mossart creations are 100% natural and made with preserved moss. Mossart products are no longer living and do not require any maintenance, trimming, nor watering.

- » Air humidity should be above 30% (may dry under 30%)
- » No maintenance, no water and no light required
- » Never spray or water and avoid direct sunlight
- » Natural texture is preserved and long lasting

## PANEL INSTALLATION

- » Pre-made panels (2 inch thick)
- » Simply screw panels in place
- » Custom sizes and shapes
- » Seamless look

# REINDEER MOSS

ByNature Reindeer Moss, actually a lichen, is our most popular moss for both large and small applications. From natural to bold shades, Reindeer Mossart comes in 11 different colours that create unique and lush designs.

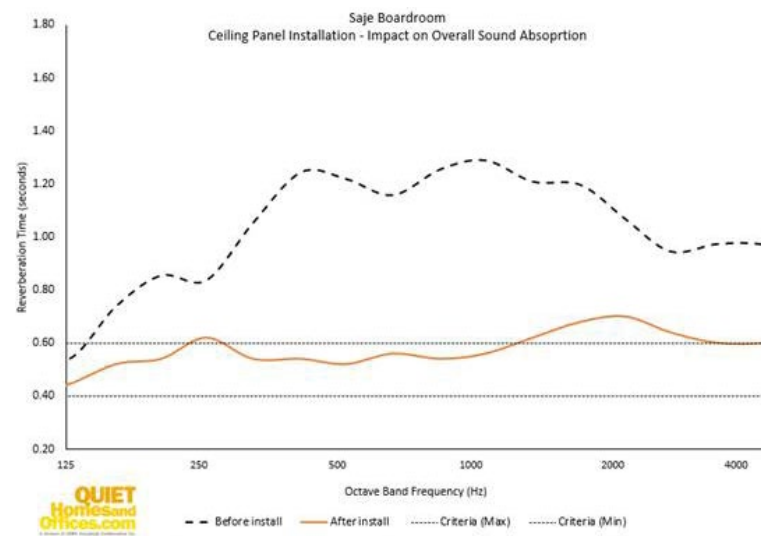

## COLOURS

Custom colours available upon request – For large volumes only

## ACOUSTIC FUNCTION

Mossart Wall Panels have significant sound-absorption. According to a study conducted by the Centre for Architectural Ecology at the British Columbia Institute of Technology (BCIT), sound absorption is relatively high with signal number ratings (NRC and SAA) in the range of a 3/4"-1" fibre board, or a carpet on underlay pad. Absorption in this range can be useful in classrooms and conference rooms to improve speech intelligibility and the quality of verbal communication.

reindeer moss acoustic panel - see diagram on page 12

## SHEET MOSS

ByNature Sheet Moss brings a very natural and organic feel to a space. Sheet moss can be used to create original décor and is often applied as a wall or ceiling covering. It exists in one colour only. Standard panels are approximately 1/4" thick.

## POLE MOSS

ByNature Pole Moss brings a chic and modern look to any space. Pole moss can be used to create original décor and is usually used in wall or ceiling coverings. It exists in one colour only. Standard panels are approximately 2" thick.

## FOLIA-PLANTS

ByNature's exclusive line of 100% natural preserved plants can be used to create an endless possibility of designs; from centre tables to unique frames and wall creations. This natural décor will last for years and will not require any maintenance (no natural light, trimming or water required).

- » No maintenance, water or light required
- » Long lasting preserved natural décor
- » No size or design limitations
- » 50 plant varieties available
- » 100% natural

## LIVING WALL SYSTEMS

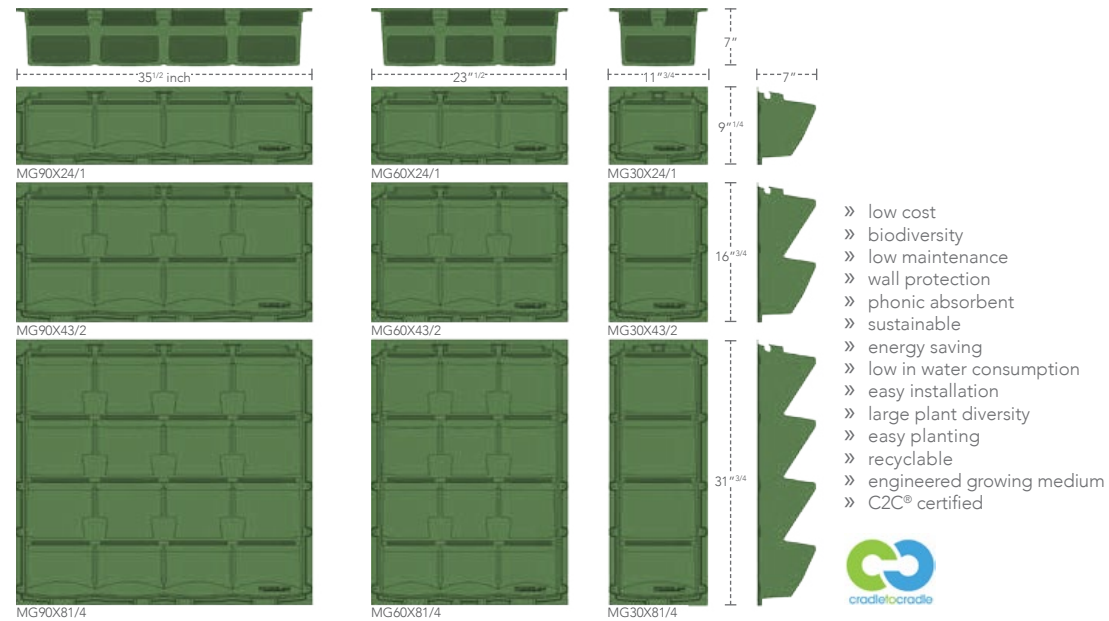

Living walls are vertical gardens that bring life to both the indoor and outdoor space. Self-sustained in specifically engineered systems, living walls can help purify the air and enhance well-being. At ByNature, we offer varied systems that can be customized as part of the building envelope or simply serve as living art.

# MODULOGREEN®

Plants thrive when they grow in rich, natural soil with access to regular light and water. That's why we designed the ModuloGreen® Living Wall which comes with a special substrate to ensure optimal plant growth, low maintenance and water consumption requirements. ModuloGreen® Living Walls are also easy to install and one of the most cost-efficient for both you and the environment.

## MODULE SIZES & FEATURES

ModuloGreen® Living Wall is the first Cradle-to-Cradle certified living wall system in the world. Made from recycled plastic and recyclable after use, the smart design of the module also evenly distributes and circulates water while optimizing the system's water consumption (220 litres / m2 / year for an exterior living wall or 110 litres / m2 / year for an indoor wall).

## PANEL INSTALLATION

Modulogreen® green walls are mounted using a wide diversity of methods and materials with the idea of keeping installation easy. Traditional studs can be used for small indoor applications while engineered brackets can be used for outdoor large scale applications. Traditionally, air space between the wall and the living wall is created to limit the risk of condensation.

- 1 aluminium brackets/studs
- 2 stainless steel self-drilling screw/anchors
- 3 self-regulating dripline
- 4 planting cells
- 5 filter

## WATER DISTRIBUTION

- 1 filter + draining layer
- 2 drainage holes
- 3 internal water distribution
- 4 growing medium
- 5 collecting gutter

## IRRIGATION

- 1 controller
- 2 valves (variable numbers)
- 3 fertilizer injector mounted in by-pass
- 4 filter
- 5 pressure regulator with gauge
- 6 Check valve
- 7 water inlet (disconnected)

Proper irrigation of a green wall requires a dedicated water supply. Ideally, a living wall system should be plugged into the main water supply with an automatic irrigation system (pictured on the left) or irrigated with rainwater (if outdoors). If there is no access to water, a reservoir connected to a pump and timer assembly can be installed or hand watered.

# MOBILANE®

All Mobilane® systems use a cloth wick to deliver water to the plants, so there is no need for pumps, drip lines, electricity or plumbing.

- » Low maintenance; water once every 4-6 weeks
- » Easy installation - no plumbing or electricity required
- » Lightweight system can be installed directly onto drywall
- » Easy cassette replacements and seasonal rotations
- » Interchangeable plant cassettes
- » Wicking irrigation system
- » Customizable frames

## SYSTEM

15.75 x 15.75 x 3.5 inch

- 1 cassette (9 four inch plants each)
- 2 cotton wick
- 3 gutter/reservoir

## DECOR

ByNature offers a variety of ornamental products that allow to integrate greenery in spaces in a variety of ways. Though small, these products still have the potential to make a big statement.

## WALLFLOWER® LIVING FRAMES

The Wallflower® Living Frame is a living piece of art that infuses any room with greenery. Suitable for walls and table tops, the Wallflower® uses a wick system that automatically irrigates plants from a self-contained reservoir.

- » Fill the reservoir once a week
- » Wicking irrigation system
- » Water level indicator

# BOSKKE® SKY PLANTERS

Designed for interiors with limited space, this unique planter infuses any interior living space with increased oxygen and revitalized air flow – without compromising floor space. Produced from 100% recycled plastic, the Boskke Sky Planter comes in a range of colours and a watertight terracotta reservoir.

- » Fill reservoir 1-2 times per month
- » Water level indicator
- » Watertight terracotta reservoir
- » 100% recycled plastic

## SYSTEM

- 1 ceiling hook
- 2 extension wire
- 3 terracotta reservoir
- 4 locking disk

**BOSKKE® SMALL**

**BOSKKE® LARGE**  
9.8 x 7.1 inch

Exclusive Canadian Distributer of **boskke**

# BOSKKE® CUBE

The traditional plant pot was deconstructed into a clear plastic body revealing the water, soil, and roots of the plants. While witnessing first hand the mechanics of plant growth, the Slo-Flo watering system and large reservoir allows water to feed up into the soil, keeping your plant healthy and watered for extended periods.

- » Fill the reservoir once a month
- » Transparent planter
- » Wicking system

## AIR PLANT COLLECTION

The Air Plant collection features a variety of products that are both modern and organic. Air plants do not have roots nor require any soil, making them low maintenance and customizable. Absorbing water from the ambient air through their leaves, air plants can be simply soaked overnight or sprayed with water once a week. Do not leave air plants in standing water.
